

the new PROF 6

Every landscape gardener has to deal with large quantities of different types of pruning waste in his daily work. Not only branches but also hedge cuttings, cuttings from flowers, plants and shrubs, ground cover and ornamental grasses have to be processed. The quickest and most effective way to dispose of this waste is to chop it on the spot.

The new ELIET Prof 6 is an all-rounder for the job.

In its self-propelled version on wheels or on tracks, you can take it to any workplace. With the ELIET shredding technology, the patented axe_Prinzip™, it can process any type of clippings from any season. The ejection pipe transports even moist, leafy clippings very quickly outside. The Prof 6 has a large hydraulic feed roller, which is optionally controlled by an ABM system.

The specially shaped, V-shaped infeed hopper ensures that larger packages of clippings are quickly and safely picked up. This efficient and energy-saving omnivore processes branches up to 10 cm thick with its new 14 hp B&S Vanguard 400 petrol engine. Make the new ELIET Prof 6 your recycling partner!

Even more comfort!

Both innovative and practical on the Prof 6 is the large access hatch, which can be opened to the side like a little door and makes the entire chopping chamber accessible without tools. When open, there is a clear view of the knife shaft and the Turbo Discharge™ paddle wheel, which has been redesigned to generate even better ejection force.

Cleaning the chopping chamber, regrinding and servicing the knives can all be quickly done by the user himself.
An advantage that landscape gardeners and maintenance mechanics appreciate.

TURBO DISCHARGE

- Impellor wheel Ø 325 mm
- Powerful blower turbine
- Suction effect through infeed chute

fast pitstop

Easy to maintain
Allows fast control and routine maintenance after each working day

Discharge pipe with
- ejection height at 1800 mm
- Rotatable over 280°
- Adjustable outblow angle

V-SAFE trademark

- New centering chute concept
- Maximum security
- Optimal ergonomics

ABM SYSTEM

- Automatic feed control
- Saves working time
- Autonomous shredding

Self Propelled
- Bring the shredder to the material
- Time saving because less movement of greenwaste
- Width less than 90 cm
- Effortless loading and unloading

Four Seasons
- Shreds all types of green waste
- Well suited for prunings of all seasons

4 SEASON shredder™

CHOPPING PRINCIPLE trademark

- 48.000 shredding movements per minute
- Patented shredding technology
- Energy efficient
- Insensitive to foreign objects
- Minimal maintenance
- Set of spare blades RESIST™/8 (24 units)

now with
VANGUARD™ COMMERCIAL POWER BRIGGS&STRATTON
400 engine

- higher performance
- lower total cost of ownership
- increased reliability
- easier start
- hardly any maintenance effort
- Security system B&S Transportguard

TRANSPORT GUARD

Engine	14 HP Vanguard™ 400
Emission standard	petrol engine stage 5 25V3
Number of cylinders	1
Cylinder cubic	408 cc
Capacity kW/HP	10,3/14
Air filter system	fully integrated cyclone air filter
Start motor	12 V electric
Fuel supply	Automatic opening and closing of the fuel tap via the stop lever

High efficiency - low operating costs - these are the characteristics of the new Briggs&Stratton Vanguard 400 engine, which is now installed in the Eliet-Prof 6 chopper.

This new single-cylinder engine is equipped with a fully integrated cyclone air filtration system, making it ideal for "difficult" working environments and allowing replacement intervals of up to 600 hours. The engine is certified to stage V, EPA stage 3.
Benefit from this latest technology in the new Eliet-Prof 6!
